Abstract (en)
A rotary compressor (1) such as a screw-type or a spiral compressor comprises a compressor stator (13) and one or more rotary compression elements (10,11), which compressor stator (13) is provided with a suction port, a delivery port (9,17) and a lubricant inlet, the lubricant being intended for lubricating each compression element (10,11), for sealing the gaps between the individual compression elements (10,11) and between the compression elements (10,11) and the compressor stator (13), and for cooling the medium to be compressed during the compression process. The compressor (1) also comprises an inlet (18) for a cooling medium for cooling the lubricant which opens out near or in the delivery port (9,17).
