Abstract (en)
[origin: WO9109138A1] A kit (10) for use in diagnosing maladies includes a carrier (26) comprising a plurality of apertures (28) for holding at least one test receptacle (12), wherein the test receptacle (12) has a test substance disposed therein. Each test receptacle (12) has a different test substance, or combination of substances, therein. The kit further includes at least one control receptacle (14). The number of control receptacles preferably relates to the number of tests to be performed, namely one control for every ten tests to be done, with a minimum of five. Preferably, the kit further includes a lysing agent for lysing blood diluent for diluting the volume of blood to be measured. The kit may also include at least one empty receptacle for use in cleaning the equipment used to perform the test.
