Abstract (en)

[origin: EP0507647A1] The invention relates to the locks of vehicles. This lock, especially for the bonnet, comprises a keeper (6), into a housing (5) of which is capable of engaging, during closing, a bolt-supporting element (2), in this particular case a rotary fork (4), cooperating by catching with a fixed stud (7) of the keeper (6). The housing (5) of the keeper (6) comprises self-centring and offset-compensating means which consist of fixed abutments (11, 12) solid with said housing (5) and elastically deformable in the transverse direction of the lock. The invention is used on motor vehicles. <IMAGE>
