Abstract (en)

[origin: EP0508031A1] The ink duct element for a rotary printing machine has a handle (10) on a first longitudinal side (4) of the element (1), a slide (6) on its opposite longitudinal side (5) facing the ductor (15), and an elbow (11) arranged between the handle and the first longitudinal side for hooking the element onto the outside edge (12) of the ink duct (13) of the rotary printing machine. Such an element allows a rapid colour change without the necessity of either cleaning the printing machine or removing parts. Additionally, the element can be used on the machine or its ink duct without change. <IMAGE>
