Abstract (en)

A clearer for draft rollers (13) is provided, wherein a slot (2) is provided on the bottom of a cloth guide (1), and the cloth guide is secured to a cloth plate (5) with a rivet (3) whose head diameter is larger than the width of the slot (2), to be held so that it is slidable relative to the cloth plate. At the same time, it has a configuration wherein an even number of ribs (4) is provided on the bottom of the cloth guide (1) to maintain a gap between the bottom of the cloth guide (1) and the cloth plate (5) so that there is no need for the work of changing the position of the cloth guide (1) even if there is a change in the roller gauges between the draft rollers (13). <IMAGE>
