Abstract (en)

[origin: EP0508199A1] The invention relates to a method of and a device for the continuous production of an expanded metalliforme band. The object of the invention is to specify a method and a device for carrying out the method, with which an expanded metalliforme band can be produced in an extremely simple and continuous manner from a metal band having the features of the preamble of Claim 1. This object is achieved by the method according to the invention in that the metal band is constantly gripped in the region of the lateral edges by feed means, and in that tension means are provided which constantly subject the central region of the metal band to a tensile force during the feed movement. <IMAGE>
