Abstract (en)

[origin: EP0508218A1] The invention relates to guiding means for sheets in transfer cylinders of sheet printing presses for rigid materials of a particular width, said guiding means consisting of a bevel gear segment (13) which can be displaced axially and fixed on the cylinder shaft (16), and to which a second bevel gear segment (14) is assigned in mirror image which is likewise mounted so as to be axially displaceable and fixable on the cylinder shaft (16) in order to convey printed sheets (12) through the printing machine between the bevel gear segments (13, 14) without additional sheet-guiding means, such that impairment of the printed image or damage is ruled out from the very beginning. <IMAGE>
