Abstract (en)  
[origin: EP0508240A2] A returnable container has a separate, inherently rigid bottom part (1), a collapsible wall part (2) forming the side walls (4, 4', 5, 5'), and a separate, inherently rigid top part (3). The wall part (2) can be inserted into the bottom part (1) and the top part (3). Furthermore, the bottom part (1) and the top part (3) can be fitted together to form a return transport container. A very stable returnable container is thus provided which can be used very often. A bladder can be arranged in the top part (3), which bladder is provided with a valve (25), which is accessible from the outside, and serves for fixing articles situated in the container. <IMAGE>
