Abstract (en)

The cardboard box (1) has a lug (13) suitable for forming into a handle (2). The lug (13) is folded in two and placed against one of the side walls of the box (1). The lug (13) has five consecutive bands (18 to 22). The first and last bands (18 and 22) are glued to one of the side walls of the box (1). The lug (13) is designed to be raised so that the second and fourth bands (19 and 21) are perpendicular to this wall and the third band (20) parallel to it. The second and fourth bands (19 and 21) possess a tongue (23, 54) which can be folded in to reveal an opening (26) for the hand. <IMAGE>
