Abstract (en)
[origin: EP0509212A2] 2.1 Plastic pipes having improved resistance to chemical agents and improved mechanical properties are to be made available. 2.2 This is achieved by means of a multi-layer plastic pipe consisting of an inner and outer layer based on polyamide, inner and outer layer being connected together in an adhesive manner by means of at least one intermediate layer of a blend of a linear crystalline polyester and a polyamide. 2.3 With the aid of the invention it is possible to obtain plastic pipes with the required improved range of properties.
