Abstract (en)  
[origin: EP0509222A1] The bracelet comprises rigid elements which are articulated with respect to each other and which are arranged in the same plane in order to form a mosaic. Around one of the elements (1) of triangular shape are arranged, in contact with the sides, three adjacent elements (2a, 2b, 2c) and, in contact with the apexes, three groups of three elements (3a, 3b, 3c; 3d, 3e, 3f; 3g, 3h, 3i), all identical to the first element (1). The elements are joined to each other by means of linking members (4a, 4b, 4c) arranged between one element (1) and each of the adjacent elements (2a, 2b, 2c), via one side to this element, and laid out so as to enable two adjacent elements to pivot with respect to one another, in all directions. The bracelet thus produced has great flexibility in terms of bending deformations in all directions and in terms of twisting deformations along any axis. <IMAGE>
