Abstract (en)

[origin: EP0509325A1] A tray (2) which is able to run on roller tracks has on its two transverse sides hooked coupling elements (9) which are directed at right angles to its plane. By means of these coupling elements (9) adjacent trays (2) can be releasably connected to one another, in that a downwardly directed hook element (12) is brought into engagement with an upwardly directed hook element (11) of the adjacent tray. In this manner, adjacent trays (2) can be connected to one another. <IMAGE>
