Abstract (en)

[origin: EP0509397A1] Cellulosic fibrous materials are treated with N-containing, basic monomers at temperatures of up to 160 DEG C in preferably aqueous medium, polymerisation of the monomer taking place with grafting of the resulting polymer onto the cellulosic fibrous material. The fibrous material modified in this way is suitable for dyeing with anionic dyestuffs, in particular those which contain a fibre-reactive group, using solely low-electrolyte and alkali-free dyeing liquors.
