Abstract (en)
A glass beveling machine (10). An electric motor is connected to a spindle (17) rotatably mounted to a table (13). An arbor (19) is threadedly and removably mounted to a spindle (17) and carries a beveling head (12) secured thereto. The bottom of a beveling head provides a grinding surface (34) and is spaced above the table (13) to allow a sheet of glass to be extended therebetween to facilitate grinding a beveled surface in the sheet. Liquid lubricant is circulated up through the spindle (17) and out onto the work piece. <IMAGE>
