Abstract (en)

[origin: JPH05170257A] PURPOSE: To obtain a device for spraying with a non-pressure container having a manual pump, securing and maintaining accurate holes for working parts, distribution header and caps when assembled. CONSTITUTION: There are provided a container 2 with a distribution header 4 able to turn around an axis B in parallel to the direction of pushing down, inclined to the front side toward a container axis A, capable of being operated by pushing down, in the upper part, and a cap 12 having actuator lever pivotally set on the front. Supporting means P is set on the actuator lever 14 to act distribution header when the user pushes down on the back part of the lever. On the cap 2, a hole 26 is set for passing of the product to be sprayed. Between the cap 12 and container 2, means for the cap to face the prescribed direction is set. The supporting means P can act on the distribution header 4 when the hole 26 locates perpendicular to the exit 8 of the distribution header 4 and each of the parts is assembled in the correct position.
