Abstract (en)

[origin: EP0510256A1] Apparatus for crushing, dispersing, wetting and mixing pumpable, non-magnetic multiphase mixtures consists of a sealed-off annular gap chamber 1 whose annular gap forms a working chamber into which the material to be processed flows from below and flows out from the top. This annular gap chamber is formed by a double pipe whose outer pipe is surrounded by an outer exciter system 4 and whose inner pipe is surrounded by an inner exciter system 5. In the working chamber, in addition to the material to be processed, there are freely movable magnetic working bodies 7 which move inside the multiphase mixture, flowing through the annular gap chamber 1 in the direction of the circulating electromagnetic fields, and carry out translatory transverse movements and rocking movements. Inside the working chamber, or the annular gap, there is a flowing-in zone 13 and a flowing-out zone 14 which are each free of working bodies. <IMAGE>
