Abstract (en)
[origin: EP0510413A2] In a gas-pressure pistol, there is adjacent to the front end of the barrel 1 a chamber 8 which is formed by a circumferential wall 4 and by an endpiece 5 having a conically inward-projecting inner part and which is in communication with the environment by way of longitudinal slots 10. As a result, the sighting length is increased and the tilting moment of the recoil reduced, without turbulence deflecting the projectile. <IMAGE>
