Abstract (en)

A fastener structure for a thermoplastic bag (B) comprises reclosable interlocking profile elements (13,14) adapted to be secured throughout the length thereof to the respective side walls (11,12) of the bag, at least one of said profile elements being deformed at spaced intervals (15a,16a) along the length thereof to cooperate with non-deformed portions on the other profile element (14), the deformations (15a) being constructed and arranged to provide an intermittent clicking sensation as the profile elements (13,14) are pressed into interlocking relation along the length of said profile elements to close fastener structure thereby providing confirmation by sound and/or touch to the user that the fastener structure is closed.
