Abstract (en)

A silver halide photographic light-sensitive material is disclosed which is improved in drying ability. Silver sludge formation in a developer used for processing the light-sensitive material is inhibited. The light-sensitive material comprises a support having thereon a silver halide emulsion layer and a non-light-sensitive hydrophilic colloid layer arranged at a position farther from the support than the position of the silver halide emulsion layer, and the non-light-sensitive layer contains a polymer latex comprising polymer particles which is formed by polymerization reaction in a medium containing gelatin.
