Abstract (en)

[origin: EP0511615A1] The invention relates to a work-platform (1) for the form of a corner, in particular for a column form in the so-called windmill principle. The work-platform (1) defines, in an L-shape, a recess (7), at the edges (5, 8) of which it is fixed to the form at at least three points (2, 3, 4). One of the three fixing points (4) is fixed to a beam (6) and is guided in the work-platform (1) so as to be displaceable into the recess (7), as a result of which the work-platform (1) can be adapted to column cross-sectional areas of different sizes. <IMAGE>
