Abstract (en)
Spraying device for a deformable container (4), comprising a closing cap (1) with supporting means (5) to which a dip tube (13) is fastened. The liquid coming from the dip tube (13) upon squeezing the container is mixed with the air from the container and the mixture is led through an opening (21) situated in the cap (1), which opening laterally connects to a bore (23) which is open at one end for discharge of the mixture to the outside, while an air duct (25) ends in the bottom of the bore, situated opposite the open end, with the axis of the air duct running parallel to that of the bore and which air duct is connected to a space (29, 32) which is normally situated above the highest liquid level (30). <IMAGE>
