Abstract (en)

[origin: WO9111332A1] The invention relates to a method of sealing the opening (4) of a so-called pocket file (1) made of foil material and containing one or two documents (11, 12), and also to a pocket file for carrying out the method. The invention consists in that one of the sides of the pocket file, for instance the backside (2), is extended with a sealing flap (6) on which a fastener material or an adhesive (8) is provided. The fastener flap is folded double around edge-parts of the document or documents (11, 12) and when the sealing flap is sealed, it will adhere against the interlying edge-parts of respective documents and also to the front side (3) of the pocket file bordering the file opening (4).
