Abstract (en)

[origin: WO9210013A1] A device for manufacturing electrical wiring looms comprises temporary holding clips (11) for the wire ends with a high holding capacity, located on the linear conveyor between the transfer clips and an insertion point. The temporary holding clips comprise a base (14) carrying the clip body (15) which has recesses (16) separated by walls (17). The walls have at least one retaining lip (21) extending substantially along the opening (16A) of recesses (16), and lengths of flexible tubing (18) which can be flattened and inserted into the recesses.
