Abstract (en)
[origin: EP0512172A1] A food mixer of the type comprising a body, a bowl (4) releasibly mounted on the body, and a motor for moving a food processing implement within the bowl is described. A guard assembly (14) is provided above the bowl to prevent access to the bowl when mixing is taking place. The guard assembly comprises two parts (16, 18) which are complementary in shape. One of the parts (18) is rotatable between at least two positions, a first closed position in which it prevents access to the bowl and a second open position about or within the second part. The second part is mounted in a fixed position relative the body of the mixer. <IMAGE>
