Abstract (en)
[origin: EP0512389A2] In a construction for suspended loads for containers, in particular for structures on heavy goods vehicles, having clothes rails or similar bars which are mounted releasably at the ends in cutouts of a pair of rail-type support profiles and which penetrate the container space, the support profiles (10, 10a, 10b) are fixed vertically on the side walls (26) of the container and at least one of them is provided with at least one longitudinally extending groove (16) as a recess in which a connection block (34) of the clothes rail (30) or similar bar can be displaced and fixed by a catch combination (19, 43). The support profile (10, 10a, 10b) is also to be provided with additional catch recesses (19) in which catch elements (42, 43) of the connection block (34) can be inserted, said catch elements being movable relative to said catch recesses and said connection block (34) being guided in the longitudinal groove (16) by at least one longitudinal rib (36). <IMAGE>
