Abstract (en)

[origin: WO9111371A1] A device for storing and dispensing doses of a pasty substance and a method for producing the device are described. The device consists of two juxtaposed forming sheets (1, 2), respectively comprising a cell (3) which forms a space for receiving the dose (4) and a channel (5) which forms a duct for discharging the dose. A deformable membrane (7) acts as a sealing device to separate the cell (3) and the channel (5). The device can be used for packaging and dispensing doses of a pasty substance.
