Abstract (en)

[origin: WO9111581A1] The invention relates to a lock with a locking function which is released by inserting a key card with a magnetized region. The front edge (8') of the key card (8) entrains a slide (25) which is released by magnetic tumblers (31). To obtain a simpler, in particular more reliable solution, at least one supplementary tumbler (62) which scans the profile of the key card (8) and which is displaced by the movement of the slide is provided in a region released by the magnetic tumblers (31).
