Abstract (en)

[origin: EP0513786A2] The invention relates to a device for the transport and the presentation of individual and multiple merchandise packages, particularly packages stacked in blocks on a carrier, such as a pallet or the like, which device consists of a pair of crossed linkages (1), the free ends of the individual rods (2, 3) being constructed in the form of connection elements (4) for connectors (5) between the two crossed linkages (1). For the said purpose and according to the invention, the individual rods (2, 3) are constructed so as to be variable in length or position relative to the cross centre (Z), and so as to be rotatable relative to one another about the cross centre (Z) into different positions and so as to be fixable relative to one another in terms of their length (L) and in terms of their position. <IMAGE>
