Abstract (en)

[origin: EP0513896A1] The invention relates to a novel medium for the preservation of live organs, biological tissues or cells. This medium is composed of a liquid biological nutrient base such as a cell culture medium, enriched by a small amount of peroxidase enzyme proteins such as lactoperoxidase and/or enzymatic proteins with ferriheme such as lactoferrin. In particular, the invention can be applied to the preservation of corneas.
