Abstract (en)

The present invention relates to a control device for traffic lights, of the type known per se comprising: a series of power switching members (160), distributed in several power modules, each comprising several traffic light lines (150) themselves having several switches, and a central logic which generates orders to be executed respectively by the power switches (160), characterised in that at least some of the traffic light lines (150) are divided into several traffic sub-lines which are logically independent. <IMAGE>
