Abstract (en)
[origin: EP0514278A1] The invention relates to a shoe hanger intended to serve as a display device in shops, more especially in department stores, supermarkets, hypermarkets or specialised shops, for facilitating the sale of this type of article. <??>The shoe hanger (1) comprises a central rod (5) ending in a suspension hook (3), and two lateral eyelets (6, 7) over which the shoes (2) are slipped. <??>According to the invention, as the shoes are connected by a flexible link (8) of the fine steel cable or polyamide thread type, the shoe hanger comprises means (14) for joining, by means of the said link, the central rod to the assembly consisting of the shoes (2) and the flexible link (8). These so-called joining means consist particularly of at least one piece which is securely attached to or integral with the central rod (5) and comprises an opening whose periphery is closed and through which the flexible link (8) passes. <??>The invention relates principally to manufacturers and distributors of shoes and the manufacturers of accessories made from injection-moulded plastic. <IMAGE>
