Abstract (en)

[origin: EP0514279A1] Dishwasher equipped with medium and coarse filters and with a microfilter. This microfilter is supplied with liquid via a system for taking a stream of liquid from the liquid moving in the bottom of the vessel, and is protected by means of a safety or discharge pipe 28 against deformation due to an excess pressure of this stream of liquid caused by clogging of this microfilter by particles of food. This discharge pipe also makes it possible to prevent squashing of the particles of food, exacerbating clogging of the microfilter, and unexpected draining of the vessel of the dishwasher through the draining pipe. <IMAGE>
