Abstract (en)

The present invention relates to a bracket for blades of elongate display members for signs for consecutive, repeated presentation of series of images, whereby said elongate display members comprise at least two, preferably three blades (3,4,5) and whereby each blade (3,4,5) is adapted to be mounted on a suitable number of brackets provided at suitable mutual distances along the elongate display member. In order to substantially reduce the number of brackets on each elongate display member, each bracket (6) comprises mounting portions (10,11,12) for all blades (3,4,5) forming part of the elongate display member (1). <IMAGE>
