Abstract (en)

An anti-theft apparatus for mobile means comprises an electronic device (11) suitable for being installed on board of the mobile means (10) and operatively connectable with force or movement detecting devices (12) of known type, in which the electronic device (11) comprises a signal generator operatively connected with a transmitter device (13), with the emitted signals being coded in such a way that they contain an identification code univocally associated with the mobile means (10) in question, and in which the transmitter means (13) is suitable for transmitting these coded signals to a coordination station (15) capable of processing these received coded signals, so as to univocally identify the mobile means (10) and determine the position thereof. <IMAGE>
