Abstract (en)

A silver halide color photographic light-sensitive material containing two kinds of magenta couplers is disclosed. They are represented by formulae: <CHEM> <CHEM> defined in detail in the specification. The silver halide color photographic light-sensitive material is capable of forming a photographic image of which the characteristic curve ascends with a gentle gradient from the low exposure region to the high exposure region and of forming photoprints of the same hue irrespective of the type of a printer employed.
