Abstract (en)

A shunt and support device for lighting elements, in particular low-voltage electric installations, comprises a main box-shaped body (2), a substantially tubular element (10) disposed within the main body (2) and adapted to define a through housing for a rod-like element (12) having a pair of longitudinal electric conductors (13) on the surface thereof, an auxiliary box-shaped body (3) rotatably engaged to the main box-shaped body (2) and provided with a support connection (4) for said lighting elements, first means (5) for locking the auxiliary box-shaped (3) to the main box-shaped body (2) according to an orientation at an angle to be set at will, and second locking means (21) adapted to lock the main box-shaped body (2) to the rod-like element (12). <IMAGE>
