Abstract (en)

[origin: EP0515788A1] The invention relates to a pressing machine having two pressing stations (2, 4), characterised in that a first pressing-body carrier (6) with an upper pressing surface (8) and a lower pressing surface (10) is movable alternately into the two pressing stations (2, 4), in that, in one pressing station (2) serving for laying down and removing material to be pressed, a second pressing-body carrier (14) with an upper pressing surface (16) alternately raisable to the height of the upper pressing surface (8) of the first pressing-body carrier (6) and pressable against the lower pressing surface (10) of the first pressing-body carrier (6) is provided, and in that, in the other pressing station (4), a third pressing-body carrier (18) with a lower pressing surface (20) pressable against the upper pressing surface (8) of the first pressing-body carrier (6) is provided. <IMAGE>
