Abstract (en)
[origin: EP0515834A1] The invention relates to a deadlock (10) which is to be used especially also for shutter cabinets, roller blinds, sliding doors or the like and which has to withstand high forces in the attempt to open the shutter, sliding door, etc. forcibly. What is proposed is a deadlock (10) having two push bolts which are advanced in a V-shaped manner from the lock case and which engage under a lock plate, counterpiece (26) or the like which is preferably also designed as a so-called lock latch.
