Abstract (en)

[origin: EP0515873A1] A colour-photographic recording material which has a reflective base and which contains, in a colour coupler-free layer adjacent to at least one colour-donating silver halide emulsion layer sensitised for the spectral region A, a spectrally sensitised silver halide emulsion which contains at least one sensitiser for the spectral region B, the sensitivity of the spectrally sensitised silver halide emulsion of the colour coupler-free layer being 0.6 to 2.5 log H units lower than the sensitivity of the sensitised silver halide emulsion of the colour-donating silver halide emulsion layer, is distinguished by a widened range of gradation in the region of the maximum densities and hence by a significantly improved detail rendering at high densities.
