Abstract (en)
[origin: EP0515931A1] In order to design a turn-and-tilt fitting, especially for windows having a laterally arranged setting-out device (9) with a relief element (12) arranged in the region situated on the aperture side, in such a way that a relief of the setting-out device (9) and of the upper pivot bearing (10, 11) takes place even before the final bearing of the window wing (1) against the window frame (2), the relief element (12) is designed as a pivoting lever (13) which is arranged rotationally movably on the frame (2) or wing (1) and which, during the closing operation, engages over or engages under a supporting part (15) on the counter part (wing (1) or frame (2)) and supports the closed or tilted wing (1) via this. <IMAGE>
