Abstract (en)

[origin: EP0515960A1] The invention relates to a method for filling containers with a liquid material, and to a filling apparatus for carrying out this method, which has a multiplicity of filling elements (8) forming filling points. At least one filling point (8M) is provided with a flowmeter which interacts with a control device. The control device generates a control value based on the measured data supplied by the flowmeter, which control value is used to control the filling points (8S) which do not have flowmeters. <IMAGE>
