Abstract (en)
[origin: JPH05162760A] PURPOSE: To obtain a container deformable by the pressure of the product to be supplied with a spring closure device maintaining a good airtightness without covering the orifice to supply the product therein with a cap when supplying. CONSTITUTION: A container 1 is provided with an outlet groove 12 that ends at an orifice 14. The orifice is closed by a membrane 2 composed of a flexible material deformable by the pressure of the product to be supplied. The membrane 2 is provided with a pin 22 able to cover the orifice 14 and a hole 23 that stays closed by the elasticity of the membrane 2 when the membrane 2 does not deform.
