Abstract (en)

Textile reinforcement (1) which can be employed for the production of laminated composites, taking the form of a flat tape, of very great lengths (L) in relation to its width (l), and comprising at least three series of yarns oriented differently in relation to each other, two series (1a, 1b) being arranged slantwise inversely one to the other in relation to the length of the tape, and the yarns (2) of the third series being, for their part, arranged parallel to the length (L). It is characterised in that the yarns (1a, 1b) arranged slantwise consist of a tubular, flattened braid which surrounds and covers a sheet of specified width (l) comprising at least one series of yarns (2) arranged lengthwise and whose support is ensured by a thermofusible material (3) exhibiting hot-melt adhesive properties also ensuring the bonding of the two-directional outer layers to the one-directional inner structure.
