Abstract (en)
The hair clip according to the invention comprises particular spring means consisting of a spring piece (7), made from elastic material, having a general U-shaped profile whose branches bear on the outer faces of the jaws (1, 4). The bearing ends of the spring piece (7) comprise hooking parts which are inserted into corresponding perforations in the outer faces of the jaws (1, 4). The spring piece (7) passes through corresponding apertures (8, 9) made in the opening levers (2, 5). Hinge means, permitting a movement of the jaws (1, 4) according to a transverse axis (I-I), consist of corresponding grooves and ribs bearing in each other and hidden by the spring piece (7). <IMAGE>
