Abstract (en)

[origin: WO9113453A1] Before the tab (4) is inserted in a perforation (3) in the base (1), at least one rib (7) is embossed in the direction of insertion on one flat side. After the tab (4) is inserted, this rib (7) is pared in the direction opposite to that of insertion and deformed in the direction of the lower side of the base. This results in an interlocking fastening of the tab (4), without deformation due to improper fastening, in the perforation (3) in the base.

Abstract (fr)

Avant insertion de la prise plate (4) dans un passage (3) du socle (1), une nervure (7) au moins est matricée sur une face plate dans le sens d'introduction. Après insertion de la prise plate (4), cette nervure (7) se décolle dans le sens contraire de l'introduction et se déforme en direction de la partie inférieure du socle. On obtient ainsi une fixation par liaison de forme de la prise plate (4) sans contraintes dans le passage (3) du socle.
