Abstract (en)
[origin: WO9113019A1] A device for affixing detachable data-carrying cards (1) on carrier sheets (2), in particular sheets of paper, has a magazine (3) which supplies the data carrier cards (1) with a card separator, a reading station (4), a card guide (5, 21) and an affixing station (6) in which the individual data-carrying cards (1) are applied to cyclically movable carrier sheets (2) labelled to match the cards and affixed by holding tabs formed from the carrier sheets (2). The device also has a housing (82) in which a coding station (80) and a labelling station (81) are arranged one behind the other in the direction of flow (C) of the plastic cards (1). On the outside of the housing (82), a separating magazine (83) which dispenses the individual plastic cards (1) is arranged on the housing in front of the coding station (80) in the direction of flow (C) and a pile delivery magazine (84) in which the labelled plastic cards (1) are collected is arranged behind the labelling station (81). The pile delivery magazine (84) has a passage for rejected cards (1), which are transported through the piling magazine (84) unlabelled if a defect is detected in the coding station.
