Abstract (en)
[origin: EP0517057A2] Cladding for window-frames, door-frames or the like, with, projecting on the frame side from a profiled wall (12) of a cladding profile, holding strips (14) for fastening to the frame, and with corner angles (15) which interconnect cladding profiled pieces (10', 10"). In order to improve a cladding (10) with the features mentioned in the introduction in such a manner that, with low manufacturing outlay, a serviceable connection of the cladding profile pieces (10', 10") is achieved, without in this case having to accept a risk of dirtying as in the case of gluing, it is designed in such a manner that a holding-strip section (16) parallel to the profiled wall has at least one jog which engages in a recess (18) of a corner angle (15). <IMAGE>
