Abstract (en)

[origin: EP0517231A1] A foamed-plastic profile strip (1) is provided for covering the region where wall and ceiling of a room meet, a rosette-like relief or similar decoration composed of two halves being formed jointly by two profile strip sections (2a, 2b and 3a, 3b) which abut each other in a corner of the room with conformal abutting faces and essentially no play. The one-part profile strip (1) is distinguished according to the invention in that it comprises at least two profile strip sections (2a, 2b and 3a, 3b) which abut each other in a corner of the room and are connected to each other in one piece by a three-cornered strip part (6, 7), the two-sided connecting faces of which on the opposite abutting faces (4, 5) of the profile strip sections (2a, 2b and 3a, 3b) form the separating faces for producing the profile strip sections with conforming abutting faces. <IMAGE>
