Abstract (en)
[origin: EP0517673A1] The invention relates to a steam ironing machine, in particular for domestic use. The machine comprises a boiler (1) for the production of steam internally to which there are two resistors (R1) and (R2) supplied with electricity independently one from the other, as well as an iron (2) which has a resistor (R3) that absorbs the same electric power as the boiler second resistor (R2); an electric commutator (C1) is envisaged, which, on command, connects to the electricity supply either the second resistor (R2) of the boiler (1) or the resistor (R3) of the iron (2). <IMAGE>
