Abstract (en)
There is described herein a liquid soap dispenser (1), improved in that it is provided with a push-operated dispensing actuation lever (4), mounted on the front lid (2) portion of the box comprising said dispenser. Said lid is pivotally connected at a position close to the bottom of the fixed portion, fastened to a wall (3), in order to open completely at 180 DEG relative to said fixed portion, for the purpose of providing a maximum ease of access during replacement of the supply cartridge and for the most convenient positioning of the dispensing arrangement within said dispenser. In addition, the pressure member (10) acting against the dispensing arrangement flexible wall is preferably comprised of an oscillating member, connected or integral with the actuating lever (4), in order to conform automatically to said flexible wall, by being maintained as much as possible in a parallel position thereto during the approaching motion thereof. <IMAGE>
